SILVER FOX 安装文档......1

Python 版本升级

Django version	Python versions
1.8	2.7, 3.2 (until the end of 2016), 3.3, 3.4, 3.5
1.9, 1.10	2.7, 3.4, 3.5
1.11	2.7, 3.4, 3.5, 3.6
2.0	3.5+

配套软件版本

- 升级到 python2.7
- Django version 1.8.17
- MySQL version 5.6.27
- Start Upgrade Python Version
- yum install -y zlib-devel zlib bzip2-devel xz-libs xz wget git tar gcc gcc-c++ gcc* openssl openssl-devel pcre-devel python-devel libevent automake autoconf libtool make git
 - -.安装 Python 2.7.10
 - 1.下载
 - wget http://www.python.org/ftp/python/2.7.10/Python-2.7.10.tgz
 - 2.解压
 - tar xf Python-2.7.10.tar
 - 3.编译/安装
 - 首先要新建一个目录,用来作为 Python2.7.10 的安装目录
 - mkdir /usr/local/python2.7
 - 然后开始编译
 - cd Python-2.7.10 #进入解压后的 Python 目录

- ./configure --prefix=/usr/local/python2.7 #等待编译完成
- make && make install #等待安装
- 到这里 Python2.7.10 就算是安装完成了,但是现在在命令行输入 Python 看到的版本仍然还是 2.6.6:那接着往下做:
- vim /root/.bash_profile

PATH=/usr/local/python2.7/bin:\$PATH:\$HOME/bin export PATH source ~/.bash_profile

- 现在命令行输入 python 看到的版本是不是 2.7.10 了!!!(如果不行自行解决)
- 二、安装 setuptools
 - wget https://pypi.<u>Python</u>.org/packages/2.7/s/setuptools/setuptool s-0.6c11-py2.7.egg --no-check-certificate
 - ◆ 如果报错 zipimport.ZipImportError: can't decompress data; zlib not available 错误
 - ◆ 如果重新编译 python2.7.10(yum install -y zlib-devel zlib)
 - chmod +x setuptools-0.6c11-py2.7.egg
 - sh setuptools-0.6c11-py2.7.egg
- 三、安装 pip
 - wget "https://pypi.python.org/packages/source/p/pip/pip-1.5.4.tar.gz#md5=834b2904f92d46aaa333267fb1c922bb" --no-checkcertificate
 - tar -xzvf pip-1.5.4.tar.gz
 - - python setup.py install
- 四、安装 MySQL 驱动
 - yum install mysql-devel python-setuptools python-devel libxml2 libxml2-dev libpcre3 libpcre3-dev python-MySQLdb -y
 - ♦ tar xf MySQL-python-1.2.3.tar.gz

- cd MySQL-python-1.2.3
 python setup.py build
 python setup.py install
- Start Django install
 - tar xf Django-1.8.17.tar.gzcd Django-1.8.17python setup.py install
 - python>>import django
 - ◆ 创建一个工程
 - cd ~
 - 创建工程名为 black_hand (黑手)
 - django-admin.py startproject black_hand
 - ◆ 新增应用(银狐)
 - django-admin.py startapp silver_fox
 - 修改 settings.py (cd ~/black_hand/black_hand)
 - ◆ 修改时区
 - TIME_ZONE = 'Asia/Shanghai'
 - ◆ 修改 databases 配置

```
DATABASES = {
'default': {
     'ENGINE': 'django.db.backends.mysql',
     'NAME': 'django',
     'USER': 'root',
     'PASSWORD': 'root',
```

- ◆ MIDDLEWARE_CLASSES 中注释掉如下参数
 - 'django.middleware.csrf.CsrfViewMiddleware',

- Add databses import db_schema
 - mysql –uroot –proot –e 'create database django '
 - mysql –uroot –proot django –e 'source django_20161212_schema.sql '
- python manage.py migrate
- ▶ 同步 db 表信息到 model
 - python ../manage.py inspectdb >model.py

- > 把后台的相关文件复制到 silver_fox 中
- ➤ 开启 django
 - nohup /usr/local/python2.7/bin/python2.7 manage.py runserver 0.0.0.0:8000 &

▶ 相关的配置成功的登陆页面展示
